# Workshop

## Apps to Supplement Executive Function July 29, 2014 ~9:00am-3:00pm

### About The Workshop

Many children and adults struggle with executive functioning. Tasks such as initiation and completion can be a daily challenge. Organization of ideas and prioritizing the to-do list can be overwhelming. Participants will discover what the different categories of executive functioning are and explore apps to help support each function. Feature matching of apps will also be analyzed and participants will leave with an understanding of how to evaluate an executive functioning app for its potential usefulness. Participants will have a hands-on experience to explore the benefits of particular executive functioning apps.

### Presenters

Linda Beliveau, Technology Integrator, ATech Services  
Stacy Driscoll M.Ed., Assistive Technology Specialist, LifeLong Assistive Technology

### Who Should Attend

Teachers, parents, paraprofessionals, direct support professionals, caregivers, those with executive functioning deficits and assistive technology implementers.
